Product **Jacket**

Brand **L & S**

Type / number of model **Article code 9061**

Product description **Woman's black metal-zipped jacket with fur-lined hood. The article label has three stripes (white, yellow and green) bearing the brand name above the word "Diffusion" in black.**

Risk type **Chemical**

Risk description **The product poses a chemical risk because it contains Hexavalent Chromium, in concentrations varying from 2.4 to 19.2 mg/kg. Given that Oeko Tex Standard 100 states that, to ensure optimum quality, total chromium content should be less than 1 mg/kg for children's clothing and less than 2 mg/kg for all other clothing, regardless of whether it is in contact with the skin, and that Chromium VI should actually be below the detection threshold, we feel a limit of 5 mg/kg of Chromium VI is a practical threshold beyond which there is a serious risk of allergic contact dermatitis. In support of this, there are clinical studies which indicate that, for leather goods, 50% of sensitive subjects experienced contact dermatitis at this level. By analogy, and given that these articles will be in direct contact with the skin for possibly an entire working day, we believe that they pose a serious risk of allergy to consumers.**

Product description	Purple track suit with white stitching, and zipper with a plastic pull tab. The front is decorated with silvery strass depicting a heart with golden edges and the statement "ORIGINAL". The swing ticket is black and bears the brand of the article in silver, together with: SIZE, COLOUR and MARTIAL in silver. The transparent plastic package bears the brand of the article in black on the upper part and transparent against a black background in the lower.
Risk type	Chemical
Risk description	The product poses a chemical risk because it contains Hexavalent Chromium, in concentrations varying from 2.4 to 19.2 mg/kg. Given that Oeko Tex Standard 100 states that, to ensure optimum quality, total chromium content should be less than 1 mg/kg for children's clothing and less than 2 mg/kg for all other clothing, regardless of whether it is in contact with the skin, and that Chromium VI should actually be below the detection threshold, we feel a limit of 5 mg/kg of Chromium VI is a practical threshold beyond which there is a serious risk of allergic contact dermatitis. In support of this, there are clinical studies which indicate that, for leather goods, 50% of sensitive subjects experienced contact dermatitis at this level. By analogy,

and given that these articles will be in direct contact with the skin for possibly an entire working day, we believe that they pose a serious risk of allergy to consumers.

Product description **Passenger car.**

Risk type **Injuries**

Risk description **The use of biodiesel fuel blends may lead to increased engine oil level due to fuel dilution of the engine oil. If the engine oil level rises over the maximum level as indicated by the oil level gauge on the instrument panel it may eventually reach a level where the oil could enter the cylinders and act as fuel. In a worst case scenario this may lead to maintained or increased engine speed, potentially leading to engine breakdown. If this happens while driving it may lead to a road accident.**
