Article QX28 black: Boy's black pinstripe suit with a waistcoat, a white long-sleeved shirt and a geometrically patterned tie, yellow/gold and brown in colour and with slanting lines of two alternating widths.

Risk type Chemical

Risk description The products pose a chemical risk because they contain hexavalent chromium, in concentrations varying from 0.6 to 5

mg/kg. Oeko Tex Standard 100 states that, to ensure optimum quality, total chromium content should be less than 1 mg/kg for children's clothing and less than 2 mg/kg for all other clothing, regardless of whether it is in contact with the skin. According to the German Federal Institute for Risk Assessment (BfR; 2007), chromium VI should actually be below the detection limit due to the substance's cutaneous sensitisation properties, i.e. its ability to cause allergic reactions such as contact dermatitis. Taking into account that the target population is children who have a tendency to suck on their clothing and that the chromium VI content is above established limit values, it is considered that exposure may occur not only via the cutaneous route, but also by the oral and inhalatory route and that the products therefore pose a chemical risk.

Product description	Vehicles produced between October 2003 and October 2010 are affected.
Risk type	Injuries
Risk description	The product poses a risk because the reverse lever bearing on the rear shock strut of the vehicles may become stiff because of corrosion, subsequently causing the reverse lever to crack. If this happens, the vehicle will sink until the rear wheel comes into contact with the mudguard, which could lead to a road accident.
