Product description

Charger for 8 or 4 AA or AAA batteries in blister pack. Sold with household mains plug and cigarette lighter plug.

Risk type

Electric shock  
Fire

Legal provisions (at EU level) and European standards against which the product was tested and did not comply

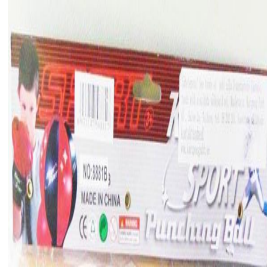

The insulation between the primary and secondary windings of the transformer is insufficient and there is a high likelihood of flashover occurring. If flashover occurs, there will be mains voltage on the exposed metal parts for charging the batteries. That means people might get an electric shock if they touch the metal parts. Also, if there are batteries in the charger at the time, the batteries might act violently to the high voltage leading to the risk of a fire. The product does not comply with the requirements of the Low Voltage Directive and the relevant European standard EN 60335.

Production dates	Production period from 2009 to 2012
Product description	Passenger car.
Risk type	Injuries
Legal provisions (at EU level) and European standards against which the product was tested and did not comply	Welded parts of the inflator in each of the curtain shield air bags could have a minute crack. If the crack propagates over time, part of the inflator could separate causing compressed gas to escape. This would result in partial inflation of the curtain shield air bag, and, in limited circumstances, one or both sections of the inflator could enter the interior of the vehicle. If an occupant is present in the vehicle, this could lead to injuries.
